

# Name Shrinking

**Grade settings:** Maximum grade: 100

**Disable external file upload, paste and drop external content:** Yes

**Based on:** [Name Shrinking](#)

**Run:** Yes **Evaluate:** Yes

**Automatic grade:** Yes

Write a program that accepts a string as input and converts the first two names into dot-separated initials and prints the output. Input string format is 'fn mn ln'. Output string format is 'ln [mn's 1st character].[fn's 1st character]'

Include a class UserMainCode with a static method getFormattedString which accepts a string. The return type (String) should return the shrunk name.

Create a Class Main which would be used to accept Input String and call the static method present in UserMainCode.

## Input and Output Format:

Input consists of a string.

Output consists of a String.

Refer sample output for formatting specifications.

## Sample Input:

Sachin Ramesh Tendulkar

## Sample Output:

Tendulkar R.S

The screenshot shows a web-based IDE interface with a browser window at the top displaying the URL <https://cognizant.tekstac.com/mod/vpl/forms/edit.php?id=110178&userid=137159#>. Below the browser, there is a toolbar with buttons: File List, Save All, Compile & Run, Evaluate, Reset, Restore, and Description. The main area is divided into two panes. The left pane, titled 'File list', shows a tree view with 'Main.java' and 'UserMainCode.java'. The right pane shows the code for 'Main.java' with line numbers 1 through 11. The code is as follows:

```
1 import java.util.Scanner;
2
3 public class Main {
4     public static void main(String[] args) {
5         Scanner sc=new Scanner(System.in);
6         String input;
7         input=sc.nextLine();
8         System.out.println(UserMainCode.getFormattedString(input));
9     }
10 }
11
```

Below the code editor, the output '137159' is displayed three times in a large, red, monospace font.
