

## Big Sky Woodworking(---RETIRED---)

**Grade settings:** Maximum grade: 100

**Disable external file upload, paste and drop external content:** Yes

**Based on:** [Big Sky Woodworking\(---RETIRED---\)](#)

**Run:** Yes **Evaluate:** Yes

**Automatic grade:** Yes

Big Sky Woodworking is a well-known Carpentry across the city. They wanted to find the count and get the order ID's based on the wood Type. The manager intimates a software developer to help in their process. You, being the software developer, develop a Java program based on the requirement.

### Component Specification: WoodMain Class

Type (Class)	Attributes	Methods
<b>WoodMain</b>	private Map<String, String> <b>woodMap</b>	Getter and setter methods for the attribute are included in the code skeleton.

**Note:** Here the woodMap, holds the Key as orderId and Value as woodType.

### Requirement 1: Find the number of orderIds based on the given woodType.

Type (Class)	Methods	Responsibilities
<b>WoodMain</b>	public int <b>findCountOfOrderIdsBasedOnTheWoodType</b> (String woodType)	<p>This method accepts woodType as an argument. If the woodType matches the woodType present in the Map, it must count the orderIds and return the same.</p> <p><b>Condition:</b></p> <ul style="list-style-type: none"><li>• woodType is a case-insensitive</li><li>• If the woodType doesn't match the woodType present in the</li></ul>

		<i>Map, return - 1.</i>
--	--	-------------------------

**Requirement 2: Filter the orderIds based on the woodType.**

Type (Class)	Methods	Responsibilities
<b>WoodMain</b>	public List<String> <b>findOrderIdsBasedOnTheWoodType</b> (String woodType)	This method filters the orderIds and returns the list of order Ids that have the same woodType.  <i><b>Condition:</b> woodType is a case-insensitive</i>

**You are provided with the main method as code template and it is excluded from evaluation.**

**Note:**

- In the Sample Input / Output provided, the highlighted text in bold corresponds to the input given by the user, and the rest of the text represents the output.
- Ensure to follow the object-oriented specifications provided in the question description.
- Ensure to provide the names for the classes, attributes, and methods as specified in the question description.
- Adhere to the code template, if provided.

**Sample Input/Output 1:**

Enter number of records to be added

**3**

Enter the records (Order Id: Wood Type)

**HSJK2878:Sandal**

**HGSU1762:Maple**

**HSGN1278:Cherry**

Enter the Wood type to be searched

**maple**

The Order Ids based on maple are 1

Enter the Wood type to identify the Order Ids

**sandal**

Order Ids based on the sandal are

HSJK2878

### **Sample Input/Output 2:**

Enter number of records to be added

**2**

Enter the records (Order Id: Wood Type)

**JGSH8712:Maple**

**SJJK6771:Cherry**

Enter the Wood type to be searched

**Sandal**

No Order Ids were found for Sandal

Enter the Wood type to identify the Order Ids

**maple**

Order Ids based on the maple are

JGSH8712

### **Sample Input/Output 3:**

Enter number of records to be added

2

Enter the records (Order Id: Wood Type)

**JGSH8712:Maple**

**SJJK6771:Cherry**

Enter the Wood type to be searched

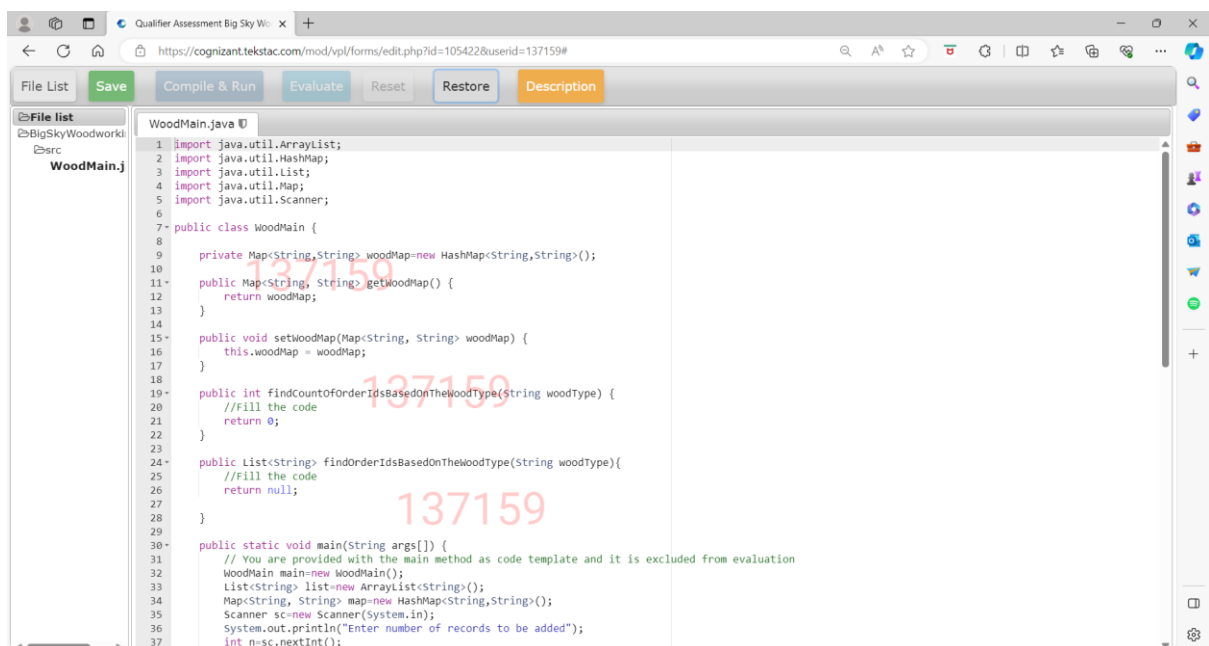

**maple**

The Order Ids based on maple are 1

Enter the Wood type to identify the Order Ids

**sandal**

No Order Ids were found for the sandal
